

Implement Client Script & UI Policy (Incident)

Phase 6 – Project Testing

6.1 Purpose

The purpose of this phase is to verify that the implemented **UI Policy, UI Policy Action, and Client Scripts** function according to the requirements of the **Implement Client Script & UI Policy (Incident)** project.

Testing is performed using the ServiceNow **Incident Management** environment.

6.2 Test Environment

The testing is carried out using:

- **Platform:** ServiceNow
 - **Application:** Incident Management
 - **Table:** Incident
 - **UI Policy:** High Impact Control
 - **UI Policy Action:** Urgency
 - **Client Scripts:** onChange, onSubmit, and onCellEdit
-

6.3 Test Scenario

The project is tested under different Incident conditions to verify:

- Mandatory field enforcement for High Impact Incidents.
 - Successful Incident submission with valid information.
 - Reversal of UI Policy behaviour when the condition becomes false.
 - Prevention of State changes through direct list editing.
 - Successful State updates through the Incident form.
-

6.4 Test Cases

Test ID	Test Case	Expected Result
TC-01	Mandatory Enforcement	Assignment Group becomes mandatory when Impact is High.
TC-02	Successful Save	A valid High Impact Incident can be saved when the required information is provided.
TC-03	Reverse Test	Condition UI Policy behaviour is reversed when Impact changes from High to Medium.
TC-04	List Edit Blocking	Direct State changes through Incident list editing are blocked.
TC-05	Form-Based Update	State can be changed successfully through the Incident form.

6.5 Test 1 – Mandatory Enforcement

Test Action

1. Open an Incident record.
2. Set the **Impact** field to **1 – High**.
3. Observe the **Assignment Group** field.

Expected Result

The **Assignment Group** field should become mandatory because the **High Impact Control** UI Policy condition is satisfied.

Actual Result

The Assignment Group field becomes mandatory when Impact is set to High.

Result: Pass

Priority 1 - Critical

* Assignment group CAB Approval

Assigned to

Assigned To is mandatory for High impact incidents.

Assigned To is mandatory for High impact incidents.

* Short description Hii

6.6 Test 2 – Successful Save

Test Action

1. Open or create an Incident.
2. Set **Impact** to **1 – High**.
3. Provide the required Incident information, including **Assigned To**.
4. Submit the Incident.

Expected Result

The Incident should be submitted and saved successfully when the required information is provided.

Actual Result

The Incident is saved successfully after the required information is provided.

Result: Pass

Evidence

Figure 6.2: Successful Incident Save

The screenshot shows the ServiceNow Incident form for INC0010005. The form is divided into two main sections: a left sidebar with search and filter options, and a main content area with form fields. The form fields are organized into two columns. The left column contains fields for Number, Caller, Category, Subcategory, Service, Service offering, Configuration item, Short description, and Description. The right column contains fields for Channel, State, Impact, Urgency, Priority, Assignment group, and Assigned to. The form has tabs for Notes, Related Records, and Resolution Information, and buttons for Watch list and Work notes list.

6.7 Test 3 – Reverse Condition Test

Test Action

1. Open an Incident with **Impact = 1 – High**.
2. Change the Impact value from **1 – High** to **2 – Medium**.
3. Observe the fields controlled by the UI Policy.

Expected Result

The High Impact UI Policy should no longer apply, and the configured field behavior should return to its normal state because **Reverse if false** is enabled.

Actual Result

The UI Policy behaviour is reversed when the Impact condition changes from High to Medium.

Result: Pass

Evidence

Figure 6.3: Reverse Condition from High to Medium

The screenshot shows the ServiceNow Incident form for INC0010005. The form is divided into two main columns. The left column contains fields for Number (INC0010005), Caller (Abel Tutor), Category (Inquiry / Help), Subcategory (-- None --), Service, Service offering, Configuration item, Short description (Hil), and Description. The right column contains fields for Channel (-- None --), State (In Progress), Impact (2 - Medium), Urgency (1 - High), Priority (2 - High), Assignment group (CAB Approval), and Assigned to (Bernard Laboy). The form includes buttons for Discuss, Follow, Update, Resolve, and Delete. At the bottom, there are tabs for Notes, Related Records, and Resolution Information, along with Watch list and Work notes list sections.

6.8 Test 4 – List Edit Blocking

Test Action

1. Navigate to **Incident** → **All**.
2. Locate an Incident record.
3. Attempt to change the **State** directly from the Incident list.
4. Observe the response.

Expected Result

The **onCellEdit Client Script** should prevent the direct State change and display the configured warning message.

Actual Result

The direct State change through list editing is blocked.

Result: Pass

Evidence

Figure 6.4: State List-Edit Blocking

6.9 Test 5 – Form-Based Update

Test Action

1. Open an Incident record from the Incident list.
2. Change the **State** field through the Incident form.
3. Save or update the Incident.

Expected Result

The State change should be accepted when performed through the Incident form.

Actual Result

The State is successfully updated through the Incident form.

Result: Pass

6.10 Testing Checklist

The following testing activities were performed:

- Mandatory Enforcement
- Successful Save
- Reverse Condition Test
- List Edit Blocking
- Form-Based Update

These tests verify the main functional behaviour of the implemented UI Policy and Client Scripts.

6.11 Defect Handling

If any test does not produce the expected result, the relevant ServiceNow configuration should be checked before repeating the test.

The following items should be verified:

- UI Policy condition.
- UI Policy Action settings.
- Reverse if false setting.

- Client Script type and field.
- Client Script active status.
- Incident field values.
- State list-edit configuration.

After correcting any configuration issue, the affected test should be repeated to confirm the expected behaviour.

6.12 Testing Outcome

The testing phase verifies the main functions of the **Implement Client Script & UI Policy (Incident)** project.

The five test cases confirm the following:

- High Impact Incidents receive the required field control.
- Valid Incident records can be saved successfully.
- UI Policy behaviour is reversed when the condition becomes false.
- Direct State changes through list editing are controlled.
- State can be updated through the Incident form.

The completed testing provides the basis for the project's documentation and final demonstration.
